Fast like today. Personal like back then.

Neo combines the spirit of the eighties home computers with hardware that stands up to the best machines of today. It starts in a second, never asks for drivers, protects your data and plays games from four decades.

Starts instantly

Neo OS lives in ROM. Chronos brings back your desktop in a second or two.

Your data stays yours

Lock, the Safe chip and physical switches for the camera, microphone and network.

Every computer is many computers

The FPGA loads classic systems, and Satellite runs Windows.

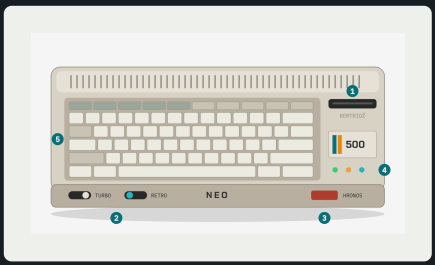

Dijana, the Neo OS mascot

THE FAMILY

Three computers, one family

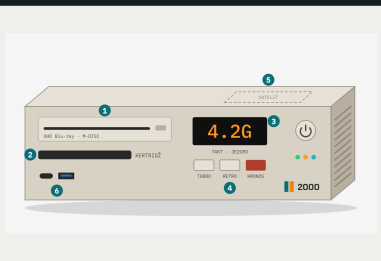

Same system, same Neo soul. They differ in power, camera and expandability.

Neo 500

from €700

- A computer in a keyboard
- ARM + FPGA, OS in ROM
- Eye S camera included
- Battery and 5G optional
- Cartridge slot, 2 × DE-9

Neo 2000

from €1,600

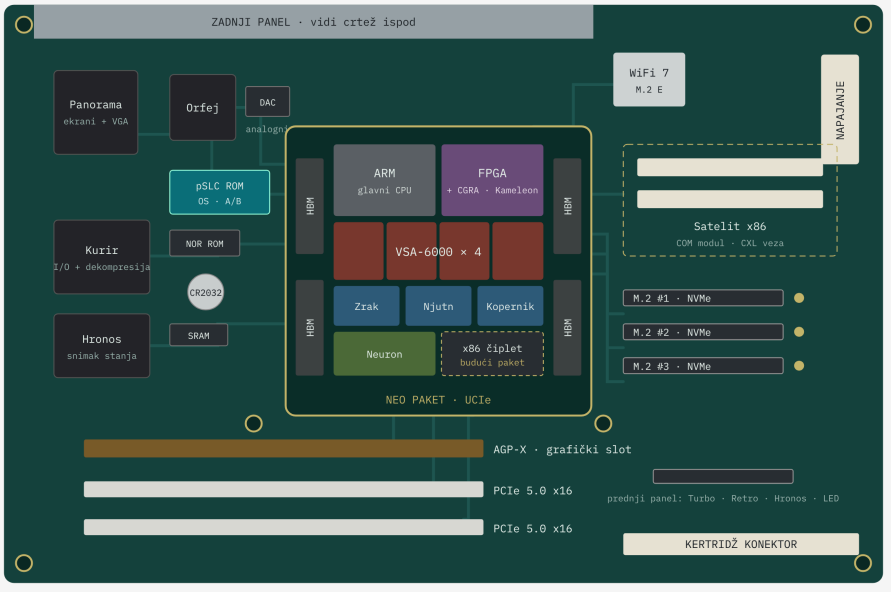

- Desktop, the monitor sits on top
- Large FPGA, 4 VSA-6000 chiplets
- Eye M camera with autofocus
- Bay for the Satellite x86 module
- UHD Blu-ray bay

Neo 4000

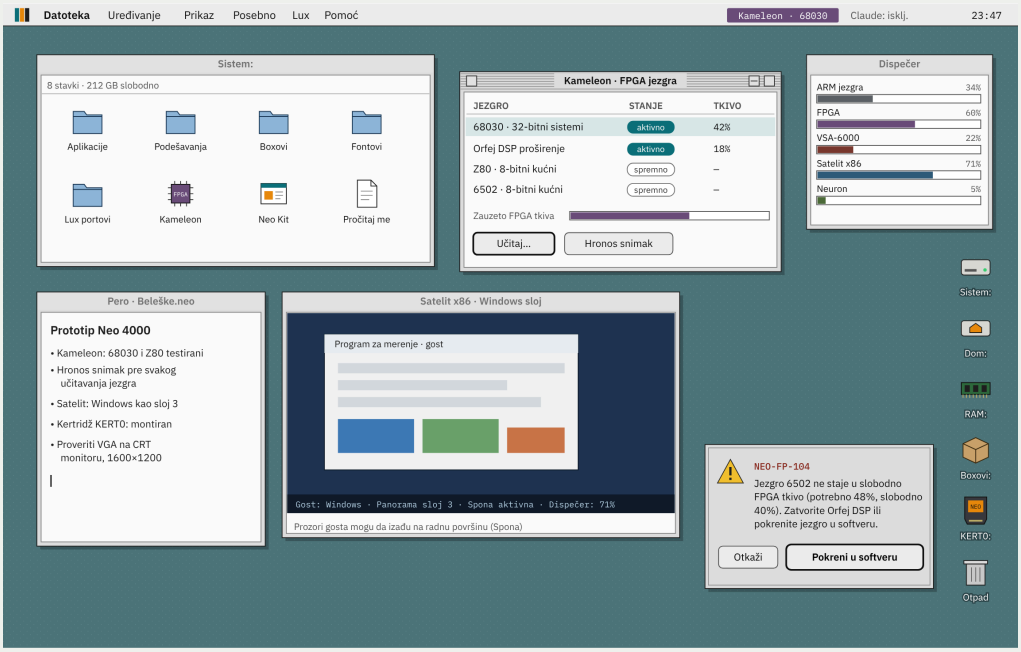

from €3,500

- Tower, workstation class
- Built-in Satellite x86, HBM memory
- Eye Pro, 1" sensor, partner optics
- AGP-X, 2 × PCIe 5, 3 × M.2
- Front DE-9 and LED display

The Neo 4000 motherboard. In the middle is the Neo package: ARM, FPGA, VSA-6000 and HBM in one package. Prices are concept estimates.

A system that stays out of your way

Renewal

One signed update for the whole system, drivers and firmware. Going back is one button.

Fortress

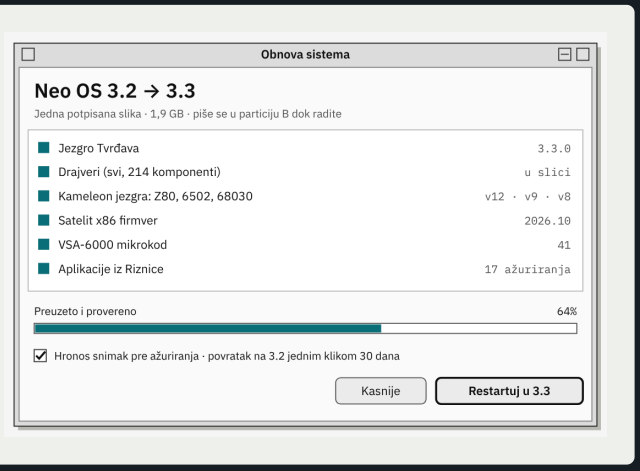

A verified microkernel. When a driver crashes, the system keeps running.

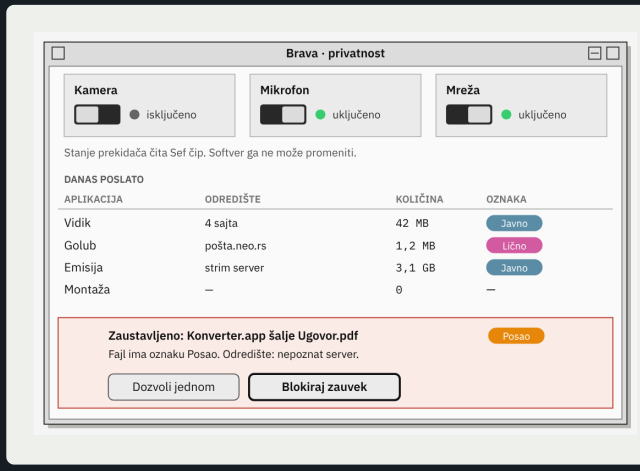

Treasury

Open source apps, with a check that the program matches its published code.

Lock

Files labelled Personal or Work never leave the computer without your confirmation.

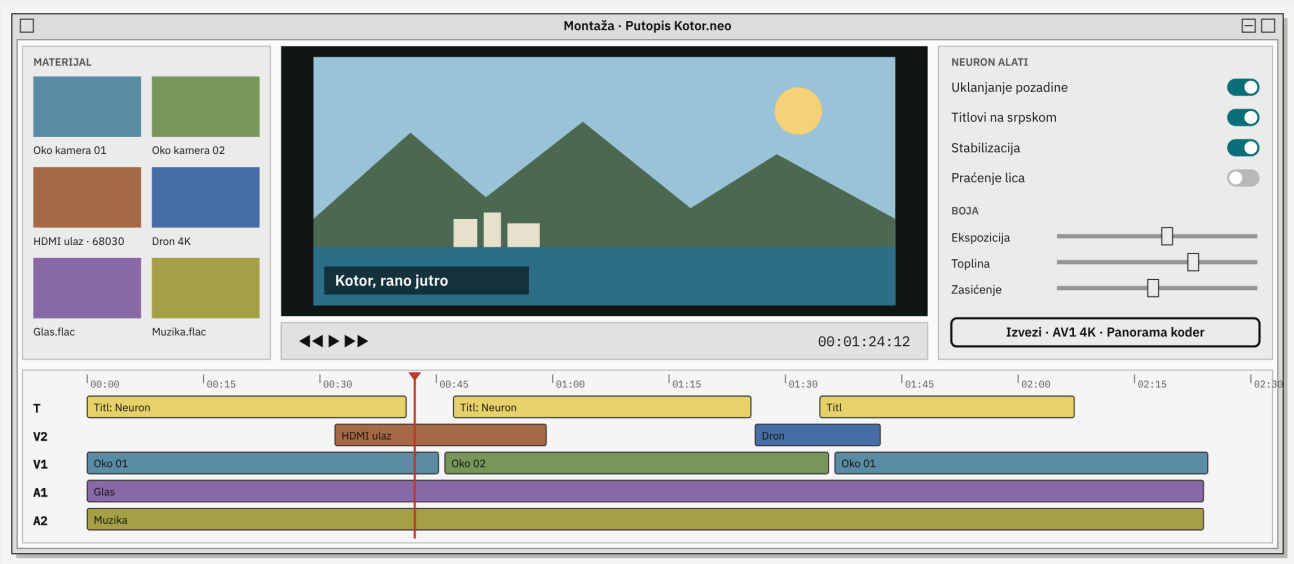

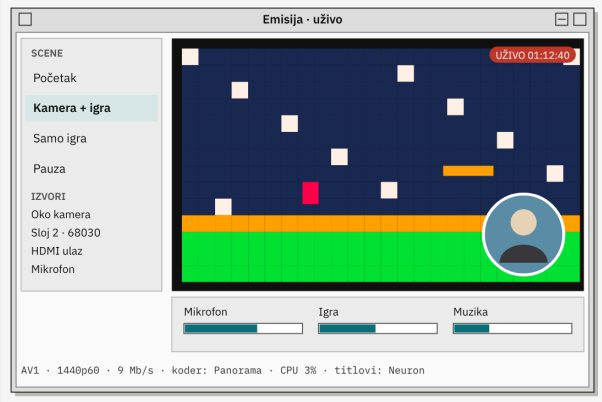

CREATE

Camera, editing and streaming, without the hassle

Every Neo comes with an Eye camera. Neuron removes the background and writes subtitles in Serbian, and Panorama encodes video without loading the processor.

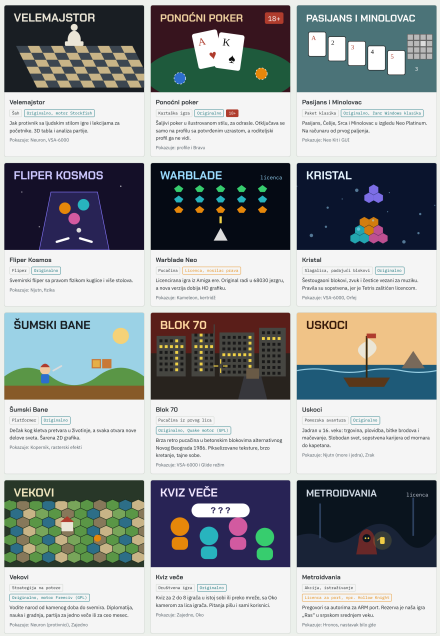

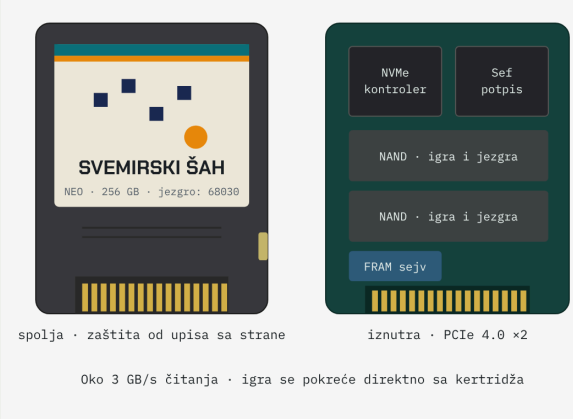

Eye S, Eye M and Eye Pro: a larger sensor and better optics with each model, a mechanical shutter on every one.

PLAY AND BE FREE

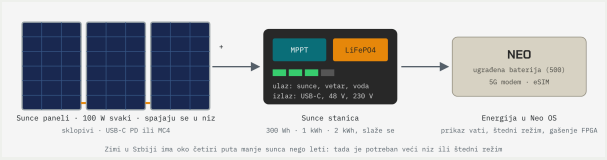

Games from four decades, power from the sun

Neo cartridge

Up to 1 TB, about 3 GB/s. The game starts instantly, and it can be lent and sold. The digital version stays fully equal.

Path to a standard

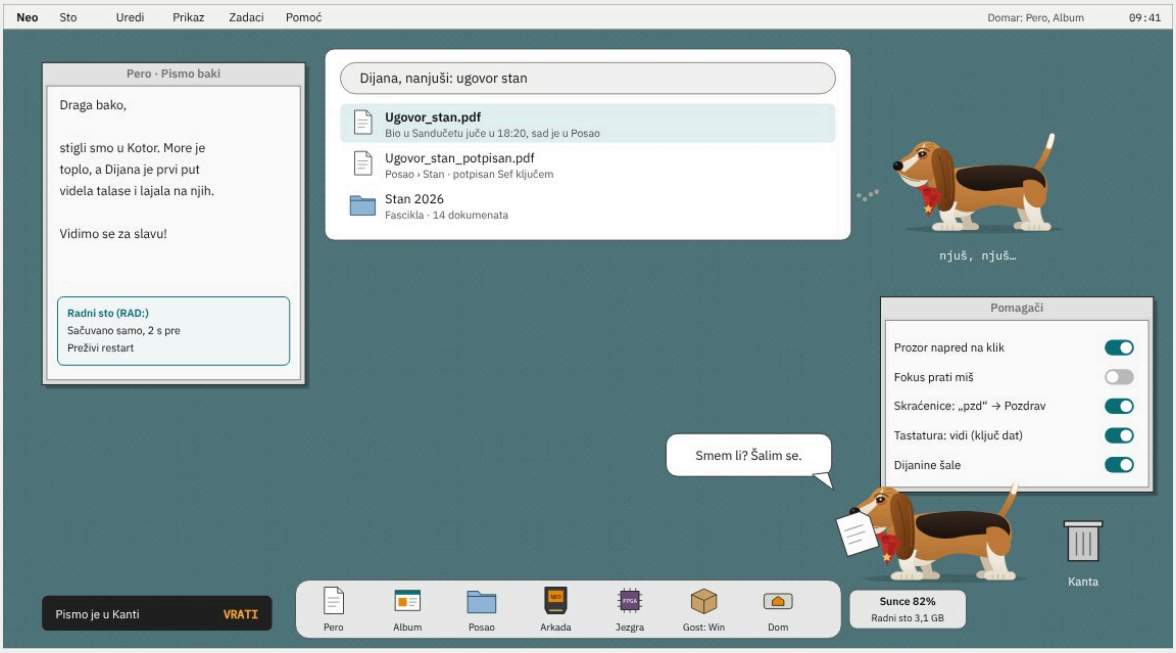

A free OS and a local manufacturing licence for every country that brings Neo into its schools.

Neo. A computer that is yours, from the first power-on to the last byte.

PERSONALITY

Neo has a soul, and stays out of your way

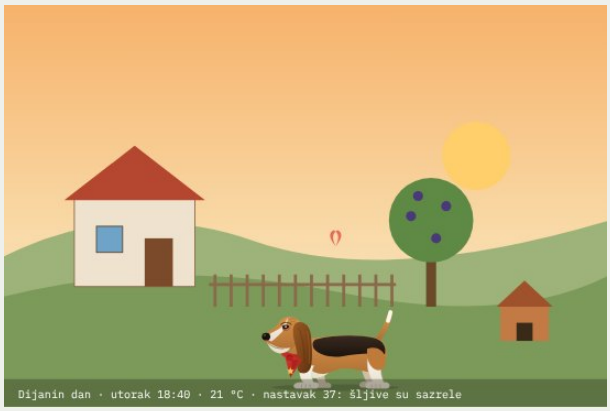

Everyday words instead of computer jargon, shelves instead of a Start menu, and Dijana, a resident who sleeps in the corner until you call her.

"Dijana, sniff out…"

Search that follows the trail and tells you where the file was last seen. Tips only when you ask, each one only once.

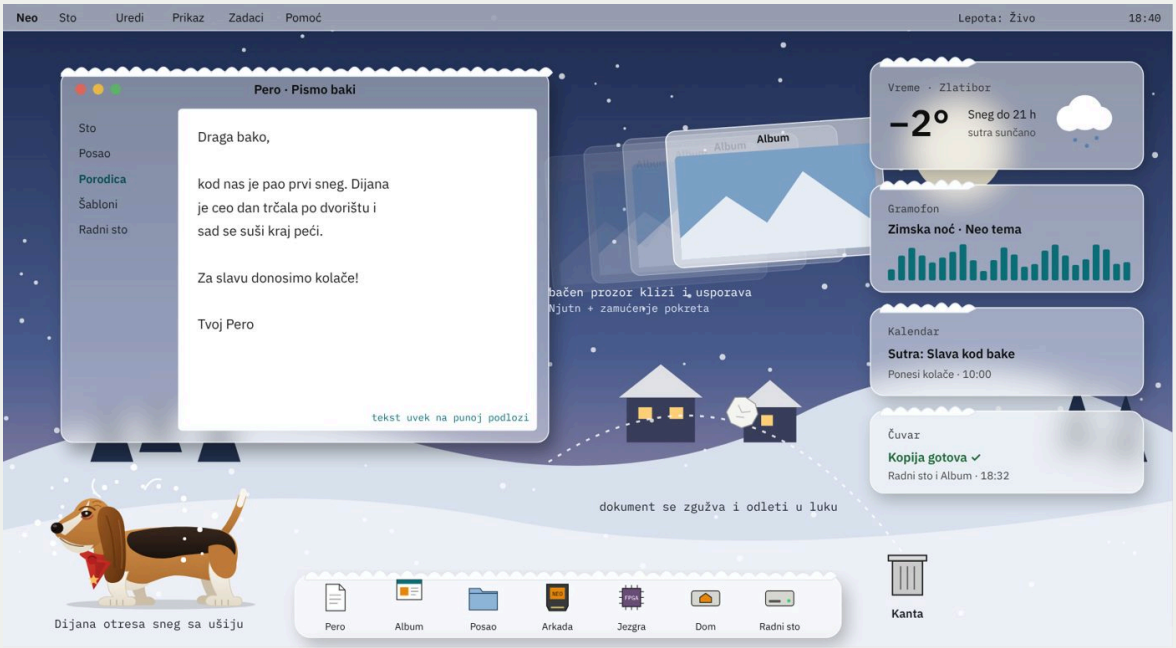

Shelves and Helpers

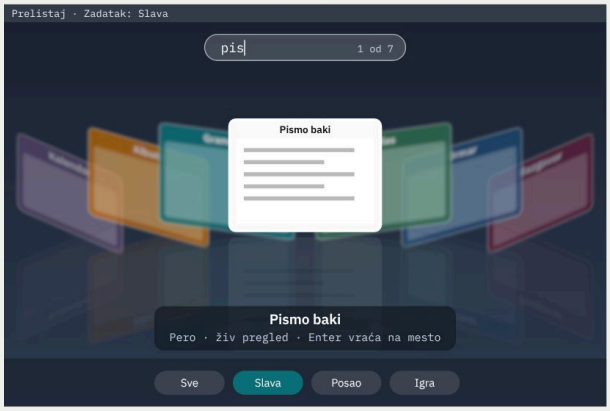

Arrange the shelves the way you like. Small helpers do one job and are switched on with one switch.

BEAUTIFUL, AUDIBLE, TOGETHER

A lavish look, while the processor rests

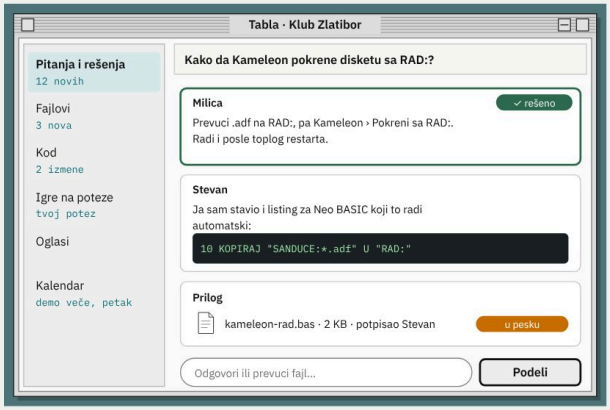

Glass, live tiles, physics and the 3D window overview are done by dedicated chips, so beauty costs neither speed nor battery.

Sound that says something

Short, quiet sounds from where things happen. Sound themes of your choice, free and in the Treasury, with residents or separately.

Club and Board

Share files, solutions and code with your club in one move, like on an old BBS, while your data stays yours.

FAST, SAFE, OPEN

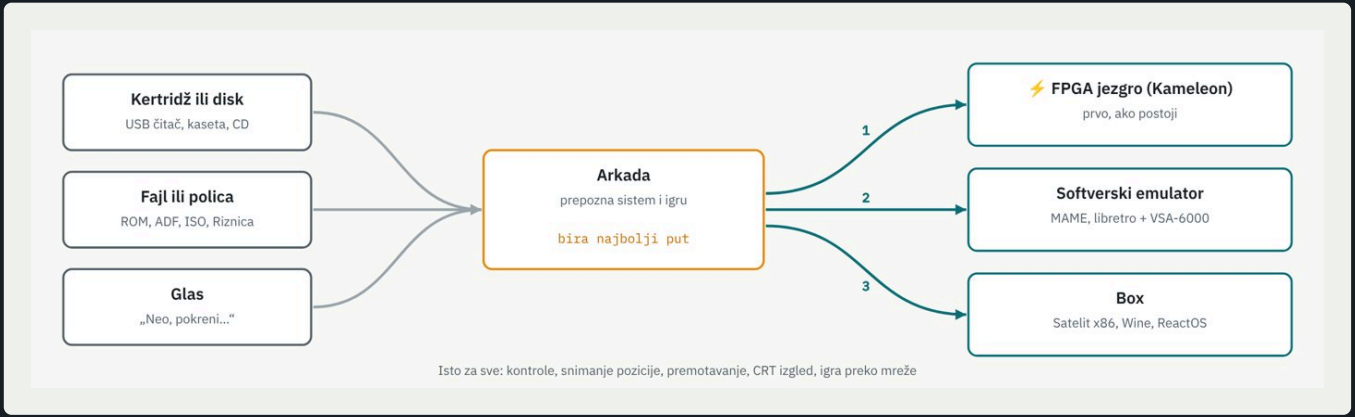

Nothing gets lost, nothing waits

No swap

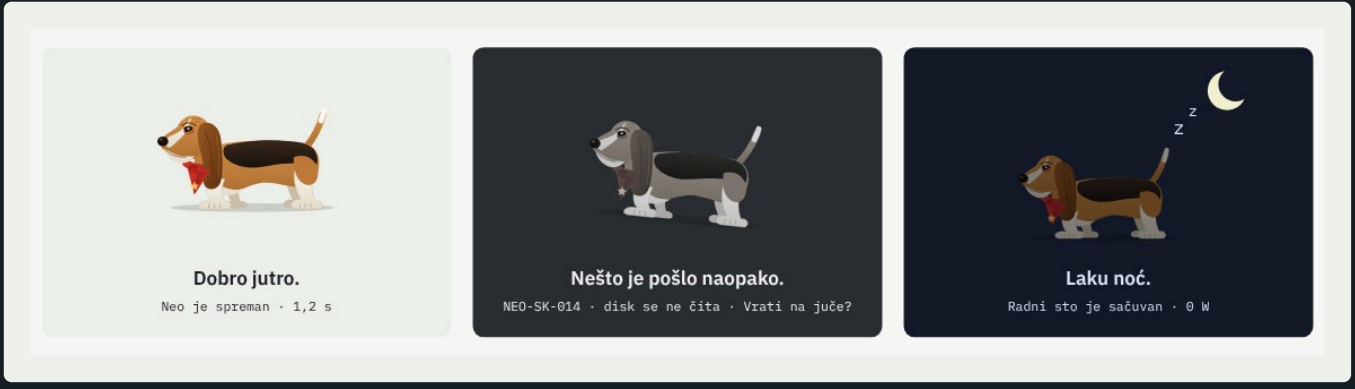

Memory is never moved to disk. When it is full, Neo puts a program you are not using to sleep instead of slowing everything down.

Workdesk (RAD:)

Open documents and your most used programs survive a restart. After a restart everything is back in place in about two seconds.

Arcade: insert a game, and Neo itself chooses an FPGA core, an emulator or a box. Same controls and save states for all.

Open standard

Schematics and specification are public. Whoever passes the Neo test suite can build Neo computers, like PC and MSX back then.

Knowledge in a box

Wikipedia, maps, books and lessons on a cartridge, without the internet.

Neo. A computer with a soul.
