What else Neo can do

For years computers and phones have been getting thinner, faster and more closed. Along the way they lost things people loved and used every day. Neo brings them back, in modern form.

PHONES THREW OUT

Replaceable battery

~~Phones and laptops glued it in.~~

Neo: The Neo 500 battery is swapped in a minute, without tools.

PHONES THREW OUT

Headphone jack

~~Phones threw it out.~~

Neo: Front headphone and microphone jacks, with the Orpheus amplifier.

PHONES THREW OUT

Expansion card

~~Phones dropped the slot, laptops soldered the memory.~~

Neo: Three M.2 slots, PCIe, AGP-X and a cartridge.

COMPUTERS THREW OUT

Optical drive

~~Computers threw it out.~~

Neo: A UHD Blu-ray and M-DISC bay, for films and archives that last decades.

COMPUTERS THREW OUT

Physical switches

~~Laptops used to have a WiFi switch.~~

Neo: Switches for the camera, microphone and network that cut the power.

GONE EVERYWHERE

Working without an account

~~Today you can't even set up a computer without an account.~~

Neo: Neo works right away, without an account and without the internet.

“Nothing new was invented. We just brought back what worked.”

YOURS, NOT THEIRS

Bought, repairable, open

GONE EVERYWHERE

Buy once

~~Programs have become subscriptions.~~

Neo: Everything in the box is paid for once, forever.

GONE EVERYWHERE

Repair at home

~~Glue instead of screws.~~

Neo: Screws, parts for ten years and a manual in the OS.

CONSOLES ARE THROWING OUT

A game you just insert

~~Consoles are moving to digital-only games.~~

Neo: Cartridge: works instantly, can be lent and sold.

COMPUTERS THREW OUT

Joystick and CRT monitor

~~DE-9 and VGA are gone.~~

Neo: Two DE-9 ports and a quality analogue VGA output.

COMPUTERS THREW OUT

Starting in a second

~~Home computers used to run from ROM.~~

Neo: Neo OS in ROM and Chronos bring back the desktop instantly.

COMPUTERS THREW OUT

Programming from day one

~~BASIC at power-on is gone.~~

Neo: Neo BASIC and Neo Cards, with a magazine full of programs.

Today's devices are made to last until the next one comes out. Neo is made to last ten years and to be repaired by anyone who can hold a screwdriver.

FREEDOM AND FUN

Like back then, only better

PHONES THREW OUT

Files and folders

~~Phones hide where your files are.~~

Neo: Cabinet shows everything, with two panels and real folders.

PHONES THREW OUT

The program of your choice

~~The phone allows only the official store.~~

Neo: Treasury is a recommendation, not a prison. Any program can be run in a box.

GONE EVERYWHERE

Old programs and games

~~A new system won't run old programs.~~

Neo: FPGA cores and Satellite run four decades of software.

GONE EVERYWHERE

Playing in the same room

~~Online games need the manufacturer's server.~~

Neo: Together: directly between computers, even without the internet.

COMPUTERS THREW OUT

Turbo button

~~It used to be on every case.~~

Neo: Turbo and Retro: full speed or the exact clock of the old system.

GONE EVERYWHERE

Remote with numbers

~~Gone along with teletext.~~

Neo: The Neo remote with numbers, arrows and a Voice button.

Neo. A computer that is yours, from the first power-on to the last byte.

LIKE BACK THEN, ONLY BETTER · COMPARISON

Neo OS, Windows 11 and macOS

The same tasks, three systems. Where the others are better, it says so.

	WINDOWS 11	MACOS	NEO OS
Account at first power-on	A Microsoft account is required in most editions	An Apple account is not required, but it is offered	There is no account at all
Ads in the system	Recommendations and offers in the Start menu and settings	Suggestions for Apple services	Never
Sending data	Basic diagnostics cannot be turned off in the Home edition	Analytics only with consent	Nothing leaves, Lock shows every attempt
Updating	System, drivers and programs update separately, with forced restarts	System in one package, programs separately	Renewal: everything at once, with one-click rollback
Starting up	From the SSD	From the SSD, fast	From ROM, about a second
Undo	Separately in each program	In each program, plus Time Machine	System-wide, unlimited, with Chronos
Old programs	Excellent compatibility	32-bit programs haven't run since 2019	Arcade, boxes and Satellite x86
Repair and upgrade	Depends on the manufacturer	RAM and disk soldered	Screws, parts for ten years, a new board in the old case
Source code	Closed	Closed, except part of the kernel	Fully open, build verification in the Treasury
Working without the internet	Partial	Partial	Full, with Wikipedia and maps on a cartridge
Where the others are better	The largest choice of programs and games	Battery life, displays and devices that work together	Neo has yet to build its software library

What worked stays. What got in the way goes.

State of the other systems: publicly available information, November 2026. Windows and macOS are trademarks of their respective owners.
